Experience the Best Internet Connection in New York City

NEW YORK CONNECT
The ISP You Can Count On

Why settle for just generic Internet Access from a telephone or cable company?

Get Totally Connected with a Comprehensive Internet Solution from NEW YORK CONNECT

It's all about having the right connection!

Why Should I Make New York Connect My ISP?

New York Connect (NYCT) is 'The ISP You Can Count ON'! Serving the NYC marketplace, since 1996, NYCT guarantees Internet satisfaction. Our users experience a real and meaningful alternative to the national Internet mass marketers Verizon, Earthlink, and AOL. Dedicated Internet Broadband Connections are common. Dedicated Internet Solutions Providers are rare. NYCT is dedicated to your Internet success.

What is Internet Broadband?

Internet Broadband is the delivery system which connects Internet users to available Internet bandwidth. Client information packets travel over the digital enabled circuit which is always-on and has a scalable high speed capability. Packets are delivered to and from the Internet for the user over the BROADBAND connection.

What are the Choices in Broadband?

T-Carrier circuits - are the favorite choice of businesses that require maximum reliability for their 'mission critical' applications. Bandwidth is transported over dedicated T-1 and T-3 circuits.

Ethernet is the ideal solution for tenants in Smart Buildings (NYCT Internet ready and enabled properties). Access to the Internet is delivered via Ethernet. Fully managed solutions are available including firewall, VPN and remote access. See a complete list of NYCT Smart Buildings on our website.

Business Class DSL (digital subscriber line) transport data by using an existing telephone line. DSL is about 95% as reliable of a T-1 circuit and at about half the cost. Businesses who are not tenants in one of our Smart Buildings often use Business Class DSL because their Internet presence is not 'mission critical'. Static IP addresses and LAN support are available with this broadband option.

Consumer DSL – Delivers screaming download speeds and excellent functionality. It works well using your existing voice line, but the phone line must be billed as a consumer line.

Cable Internet – New York Connect Internet is available over Time-Warner Cable for residential customers only. Co-axial connection (same transport as your cable television signal) provides fast and reliable access, but without a static IP capability.

10 GREAT REASONS TO GET DEDICATED BROADBAND INTERNET FROM NEW YORK CONNECT

- NYCT can deliver the correct broadband solution for you.
- NYCT works on your existing phone line or Ethernet – Cancel your second phone line.
- NYCT broadband is turnkey and user friendly.
- NYCT provides on-site setup, installation and support.
- NYCT guarantees bandwidth, speed and up-time.
- NYCT allows you to share your connection over a network in real-time.
- NYCT can work with wireless LAN.
- NYCT can manage your firewall and Internet security.
- NYCT allows primary computer access remotely over the Net.
- NYCT supports real-time chat, instant messenger, and all IP services. We do not filter your access or bandwidth.
